Job Title: **IoT Engineer**

Company: **Vision Technology Development**

Industry: IT&C

Reports to: Development Manager

Contact: mailbox@vision.ro

Location: **Bucharest/Pitesti**

Job Type: **Full Time**

Job Level: **Junior, Intermediate**

Our mission is to develop the specific knowledge, the right approach, and the proper software tools to increase our customer's advantage in digitalization and automation partnerships.

We aggregate data, people, and processes in a coherent vision, reinventing the workplace with AI, automation, and Internet of Things.

We support organizations to digitalize their assets, operational processes, and customer services so they can exploit the digital and physical connections between systems, people, places and things.

We are looking for ambitious and creative **IoT engineers** to work on sensors, develop and manage the device connectivity and software modules of our intelligent systems.

Job Description:

- Involved in technical design, ongoing configuration, testing, and maintenance of IOT applications and equipment's
- Investigates how different technologies (equipment's and pieces of software) works together
- Build software modules in Python, C and Linux for testing and production purposes
- Understand and work on electronic circuits and other hardware components

Skills and Competencies:

- Intermediate knowledge of IoT systems (LoRa Wan, radio communication, sensors, lighting and cameras, etc.)
- Good understanding of IoT systems architecture and electronic circuits
- Superior problem-solving skill
